

- 3. These columns include the survey estimates and the 95% confidence bounds for the measure. In this table, for example, for the total population of Utah, 11.6% reported no health insurance coverage. The 95% confidence interval ranges from 10.1% to 13.2%.
- 4. This column reports the estimated number of Utahns at risk, according to the measure. It is calculated by multiplying the survey estimate by the number of people in the population. In this example, the estimated number of males who were uninsured is $156,100\,(12.2\%\,x\,1,275,758)$. This number is always rounded to the nearest $100\,\mathrm{persons}$.

2. The second and third columns provide estimates of the population size and distribution across the subgroups in column 1. For example, in this table, males make up 50.4% of the total population and account for 1,275,758 of the total 2,528,926 estimated Utah population.

1. The first

column identifies

the subgroups

for which the

measure was

calculated.

A Profile of Utahns Without Coverage

Table 1. Percentage of Persons With No Health Insurance Coverage by Sex, Age Group, Sex and Age Group, Poverty Status, Hispanic or Latino Ethicity, Employment Status, and Education Level, Utah Residents, 2005

5. This column provides an estimate of how the Utahns at risk are distributed across the population subgroups in column 1. It is not a distribution of the total population, only those Utahns at risk, according to the measure. This number is calculated by dividing the number of persons in the subgroup who are at risk by the total number of persons at risk. For example, in this table, among the total population reporting no health insurance, 53.3% were male (156,100/ 292,800) and 46.7% were female (136,800/ 292,800).

1 Population estimates of sex and age groups based on 2005 baseline projections, and Hispanic or Latino ethnicity based on 2004 baseline projections, Governor's Office of Planning and Guiget, REMI model system; all others based on the 2005 UHSS and rounded to the nearest 100 persons.

2 Asymmetric confidence bounds were calculated using the logit transformation.

3 Rounded to the nearest 100 persons.

4 Figures in these columns may not sum to the total because of missing values on the grouping variables.
*** Insufficient sample size for calculation of population estimates.

- Persons living in households with incomes below 100% of poverty were significantly more likely (36.4%) than others to lack health insurance.
- Among uninsured adults aged 19 to 64 years, 70.1% reported working either full or part time.

Relevant bullet points are also found after tables where space allows.
